

K208511 – 85 sec

DESCRIPTION

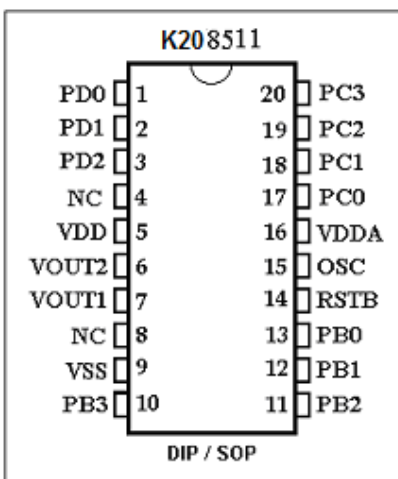

K208511 is a 8-bit MCU based Voice chip. It is manufactured with Standard CMOS process with embedded voice storage memory. It can store 85sec voice message with 4-bit ADPCM compression at 6KHz sampling rate. 8-bit PCM is also available to improve sound quality. There are eleven programmable I/O pins. Key trigger and Parallel CPU trigger mode can be configured according to different application requirement. User selectable triggering and output signal options provide maximum flexibility to various applications. Built-in resistor controlled oscillator, 8-bit current mode D/A output and PWM direct speaker driving output minimize the number of external components. Two levels volume control for PWM speaker direct drive is available.

TYPICAL APPLICATIONS

Using 3.3V Battery Direct Drive Speaker

Using 4.5V Battery with COUT speaker drive

5V CPU Control with COUT

Note for COUT speaker drive:

1. C1 must be connected as close to the chips VDD and VSS pins as possible.
2. Rb is base resistor from 120 Ohm to 390 Ohm depends on value of VDD and transistor gain.
3. Tr is an NPN transistor with beta larger than 150, e.g. 8050D.
4. Rosc = 610K Ohm with Vdd=3.0V can support sampling rate up to 14KHz.
5. For sampling rate higher than 14KHz, smaller value of Rosc should be used.
